ABSTRACT

The Virginia State Council of Higher Education presents in this report analyses of resident courses taught, student-credit-hours produced, and instructional salary costs at the state-controlled colleges and universities. Further, the data include the number of different courses taught, the number of classes taught, the semester hours of classes taught, the weighted average size of classes taught, the number of fulltime equivalent FTE resident teaching faculty, average student credit hours produced per FTE faculty, instructional salary cost-per-student credit hour produced, and instructional salary cost-per-FTE resident teaching faculty. THE VOLUME AND COST

OF INSTRUCTIONAL SERVICES

AT VIRGINIA'S COLLEGES

STATE-CONTROLLED COLLEGES AND UNIVERSITIES, 1970-71

April, 1972

INSTITUTIONS PRESENTED IN THIS REPORT[a]

Four-Year Colleges and Universities

Christopher Newport College of William and Mary, Newport News
Clinch Valley College of the University of Virginia, Wise
George Mason College of the University of Virginia, Fairfax
Longwood College, Farmville
Madison College, Harrisonburg
Mary Washington College of the University of Virginia, Fredericksburg
Norfolk State College, Norfolk
Old Dominion University, Norfolk
Radford College, Radford
University of Virginia, Charlottesville
Virginia Commonwealth University, Richmond
Virginia Military Institute, Lexington
Virginia Polytechnic Institute and State University, Blacksburg
Virginia State College, Petersburg
The College of William and Mary, Williamsburg

Two-Year Branch Colleges

Eastern Shore College of the University of Virginia, Wallops Island
Patrick Henry College of the University of Virginia, Martinsville
Richard Bland College of the College of William and Mary, Petersburg

Divisions of the State Department of Community Colleges

Blue Ridge Community College, Weyers Cave
Central Virginia Community College, Lynchburg
Dabney S. Lancaster Community College, Clifton Forge
Danville Community College, Danville
Germanna Community College, Fredericksburg
John Tyler Community College, Chester
Lord Fairfax Community College, Middletown
New River Community College, Dublin
Northern Virginia Community College, Annandale
Southside Virginia Community College, Alberta
Southwest Virginia Community College, Richlands
Thomas Nelson Community College, Hampton
Tidewater Community College, Portsmouth
Virginia Highlands Community College, Abingdon
Virginia Western Community College, Roanoke
Wytheville Community College, Wytheville

---

[a] The listed institutions' names, affiliations, and status are presented as of the 1970-71 academic year. Since that date, and as of July 1, 1971, Eastern Shore and Patrick Henry Branch Colleges have become Community Colleges.

INTRODUCTION

The State Council of Higher Education presents in this report analyses of resident courses taught, student-credit-hours produced, and instructional salary costs at the state-controlled colleges and universities. All analyses are based on data for the Fall term of 1970-71.

This publication is a companion to the State Council's report Those Employed at Virginia's Colleges, also for 1970-71. Both of these reports are being published for the third time.

In recent years, such studies have received nationwide recognition as essentials in statewide planning and financing of higher education. The higher education community has recognized for some time the need for an application of "cost accounting" to expenditures for higher education. Requests for objective analyses of instructional costs have resulted in the preparation of studies similar to these reports by the State Council. Educators and law makers have found few other means of obtaining meaningful interpretations of instructional costs of institutions with variations in missions, enrollments, and program offerings. This report is designed and prepared to be helpful to institutional officials in the management and operation of their institutions as well as to inform other interested persons on patterns of instructional expenditures.

In this study the instructional component of the output of colleges and universities is measured by credit hours. "The credit hour is the usual transaction unit in higher education. Tuition usually corresponds to a certain number of credits, and faculty contracts describe faculty responsibilities in terms of credit hours. While the number of credit hours given for a course often (but not always) corresponds to the number of hours that a course meets per week during the standard term, it is more importantly taken roughly to represent some content of material imparted to students. Thus, the attainment of a degree usually requires completion of a scheduled number of credits."[1]

Higher education in the United States is characterized by its diversity, and this extends to the way in which instructional programs are offered. Therefore, any conclusions which might be drawn from this report should be based on a composite examination of all the ratios, averages, and other data presented in the tables. No single index of productivity has been developed which adequately measures the many different instructional processes.

Scope of the Report

The listing of institutions in this report presents the names of Virginia's state-controlled colleges and universities which are included in the study.

---

[1] June O'Neill, Resource Use in Higher Education (Berkely, California; Carnegie Commission on Higher Education, June, 1971), p. 3.

The listing presents the institutions' status as of the Fall term 1970. It should be noted that Eastern Shore and Patrick Henry changed from two-year branch colleges of the University of Virginia to community colleges on July 1, 1971. Classes which were taught by faculty contributing their services and by faculty members compensated from funds not controlled or disbursed by their respective institutions, have been omitted from this study. Included in this group would be military science classes, classes taught by instructors receiving no pay, and classes taught through the auspices of other public agencies at no expense to the institution. In addition, the time and salary of faculty members teaching non-credit courses have been omitted from the analyses.

Also not included are data on classes taught by medical, dental, and pharmacy faculty at the University of Virginia and Virginia Commonwealth University, and marine science faculty of the University of Virginia and William and Mary who are located at the Virginia Institute of Marine Science.

The data reported by the institutions on a quarter system (Virginia Polytechnic Institute and State University, Radford College, and all of the community colleges) have been adjusted to a semester basis for Sections 2 and 3 of this report, and appropriate adjustments have been made for Radford College which operates on a quarter system but awards credit in semester credit-hours.

Definitions and Basic Criteria for Analyses

This report analyzes instructional activity according to four, and in some cases five, academic levels and also 27 areas of study, or academic disciplines, adapted from the United States Office of Education classification system. These 27 subject fields do not necessarily correspond to the departmental organization of the various institutions. Instructional activity has been classified by the institutions as foundation level, lower level, upper level, professional level, and graduate level. Developmental courses preparatory for admission to occupational-technical, college transfer, or four- or five-year degree programs have been reported as foundation level. Courses designed for freshmen and sophomores have been reported as lower level. Courses designed for juniors and seniors and not normally open to freshmen and sophomores have been reported as upper level. Those courses designed for students enrolled in a first professional degree program in law (Juris Doctorate) have been reported as professional level courses. Courses designed for students enrolled in a graduate degree program and normally limited to students holding a bachelor's degree, have been reported as graduate level courses.

"Level of instruction" in this report is interpreted in two different ways. In some sections, analyses are made by level of course, and in others, analyses are by level of student. The analyses by student level are carried out in terms of the academic level of students actually enrolled in the courses regardless of the course level designation. Analyses by course level, on the other hand, are made in terms of the designated level of the courses as determined by institutional officials. For the purposes of this study, faculty instructional activities for resident credit and their direct salary costs have been determined

on the basis of the number of student-credit-hours resulting from classes taught without reference to student-contact or clock hours. One student-credit-hour would result from one student taking a one-credit course for a given term, and a class of 10 students enrolled in a three-credit course would produce 30 student-credit-hours.

Faculty members, as presented in this study, include those individuals engaged in resident teaching activities, either on a full-time or part-time basis, who are responsible for and are in charge of class, quiz, drill, or laboratory sections. Included are laboratory assistants, teaching assistants, teaching fellows, and lecturers if they meet the preceding criteria. Faculty members teaching during the evening hours have been included if their classes were offered for resident credit. Not included, however, are student assistants, teaching assistants, or other personnel engaged in subordinate functions.

The statistic of full-time-equivalent (FTE) faculty member has been utilized in this study to provide a common basis of comparison for full-time and part-time faculty members. Part-time instructors and faculty members not devoting full-time to resident credit instruction were included in the summaries of FTE faculty members at a percentage of full-time as reported by the respective institutions.

SECTION 1
ANALYSES OF COURSES AND CLASSES

NUMBER OF DIFFERENT COURSES TAUGHT

Any institution of higher education, in implementing its philosophy and attaining its objectives, must relate its program to the competence of its faculty and to the ability and desires of its students. Also, the number and variety of curricula and courses offered by colleges and universities are influenced by a number of other factors. Of particular significance are (1) faculty interests and ambitions, (2) financial resources available to the institution, (3) student enrollments, and (4) competition for qualified faculty.

Tables 1 through 5 present the number of different courses taught by course level and subject field at each institution during the Fall term 1970-71. In these tables a course has been counted only once, regardless of the number of duplicate sections involved, the number of times it may have been offered during the academic year, or regardless of the credit it carried. Laboratory and quiz class periods have been considered as separate courses. These tables may be studied by the reader in a variety of ways to appreciate the range of course offerings at the institutions. If one assumes that a full-time student takes ten courses during the period of a year, he would be able to complete all the Fall 1970-71 offerings at the smallest two-year institution in three years while it would take in excess of 122 years to complete all the offerings at a university with the broadest spectrum of course offerings.

Table 6 represents one approach to analyzing course offerings by comparing full-time-equivalent (FTE) student enrollments (by institution and course level) with the number of different courses taught during the same term. For example, the total column of Table 5 shows that 221 different courses at all levels were taught at George Mason College. Table 6 indicates there were 2,054 FTE students enrolled in these courses during the same term. Therefore, there was one different course taught for each 9.3 FTE students at George Mason.

Student-course ratios presented in Table 6 show that, at the lower level, VPI&SU's ratio of 33.0 FTE students to each course is nearly twice the average for all four-year institutions. This high ratio is partially responsible for this university's instructional salary cost per student-credit-hour produced, which is presented later in the report as being among the lowest. This correlation at the lower level can, in fact, be observed at almost all of the universities. Christopher Newport has a different course for every 8.8 students at the lower level. This is the lowest ratio at the lower level of any four-year institution.

Among the two-year institutions, the student-course ratios of Eastern Shore and Southside Virginia Community College are quite low, no doubt caused primarily by very low enrollments. Data in a later section show that these institutions also have considerably higher instructional salary costs per student-credit-hour produced than almost all the other two-year institutions.

At the upper level, George Mason, Old Dominion University, Virginia Commonwealth University, the University of Virginia, and VPI & SU have student-course ratios which are above or comparable to the state average for all institutions.

Any analysis of the graduate and professional levels of Virginia's state-controlled institutions must recognize that there is relatively small statewide graduate enrollment, and also that approximately 60 per cent at those levels attend the University of Virginia and VPI & SU. At the graduate level the student-course ratios of Longwood, Madison, Radford, and VPI & SU are among the lowest.

[a] FTE student enrollment derived from student-credit-hours classified according to course level. The FTE enrollment is derived by dividing foundation, lower, upper, and professional and graduate level law student-credit-hours by 15 and graduate student-credit-hours by 12. Because of the lower divisor for graduate student-credit hours, a slight variation in the number of FTE students calculated by course level and the number calculated by student level results. Does not include data on medical, dental, and pharmacy instruction at the University of Virginia and Virginia Commonwealth University. Also not included are data on military science instruction, instruction carried on by faculty not compensated through the institution, and instruction taught by personnel of the Virginia Institute of Marine Science.

NUMBER OF CLASSES TAUGHT

Many of the different courses included in Tables 1 through 5 are taught in two or more class sections because of large enrollments. Tables 7 through 11 show the number of class sections taught by course level and subject field at each institution during the Fall term of 1970-71. As an example of the difference in data on courses and those on classes, a lower level course in mathematics, taught in five class sections, perhaps because of a large enrollment, would only be listed as one course in Table 2. In Table 8, however, it would be included in the mathematics and statistics column as five classes.

7. NUMBER OF CLASSES TAUGHT (foundation level)

SEMESTER HOURS OF CLASSES TAUGHT

The number of semester hours of classes taught by course level, subject field, and institution is presented in Tables 12 through 16. This analysis serves as one evaluation of the volume of instruction since it includes the aggregate of the credit values of every class, quiz, and laboratory section offered during the Fall term of 1970-71.

The number of semester hours of classes taught is quite often used by institutions as a measurement of faculty load. Under those circumstances, the data which are presented in Tables 12 through 16 can serve as an index to faculty requirements.

Another, and perhaps more useful, measurement of faculty load is student-credit-hours produced per full-time-equivalent faculty member. Student-credit-hours produced data in Section 2 recognize the number of students enrolled in courses, as well as the credit value of the courses. In Section 3 of this report student-credit-hours produced is related to full-time-equivalent faculty data.

WEIGHTED AVERAGE SIZE OF CLASSES TAUGHT

One approach to a study of class size would be to divide the total enrollment for all classes by the number of classes taught. However, a preferable interpretation of class size is one that gives consideration to variations in credit values, since an insight into faculty instructional loads can be obtained from this analysis. The use of the credit value of the course to weight class sizes is appropriate since that is a measure used to indicate a judgment of the extent of the content of a course. Credit value, usually expressed in hours, is also one of the measures used to express the requirements for a degree. Data on weighted average size of classes taught, such as are presented in Tables 17 through 21, are obtained by dividing student-credit-hour totals by the aggregate credit value of all classes. This series of tables shows substantial differences in class sizes among subject fields and instructional levels. Various patterns of class size have developed over the years, such that one might expect large or small classes in given subject fields at given levels. The nature of the subject matter and teaching methodologies necessitate small classes in some areas, while large classes are appropriate in others. Small class sizes, can however, be the result of an excessive number of courses offered to a given student enrollment. This analysis recognizes variations in credit values, since a class offering three hours credit is included in the average at three times the weight of a class having only one hour credit. The reader is again cautioned that the 27 subject fields shown in these tables do not necessarily correspond to the departments of instruction with similar titles at the various institutions.

At the lower level, shown in Table 18, the weighted average size of classes varies from 37.8 at VPI & SU to 18.2 at Virginia Military Institute for the four-year colleges and universities. For the two-year colleges, the range is from 26.9 at Northern Virginia Community College to 12.1 at Eastern Shore.

At the upper level, shown in Table 19, the weighted average size of classes for four-year colleges and universities ranges from a high of 20.8 at VPI & SU to a low of 12.6 at Virginia Military Institute.

As indicated in Table 20, the weighted average sizes of classes at the graduate and professional level are significantly below those at other levels. This is primarily due to small graduate enrollments, directed study, and individual research. Notable among the exceptions are the fields of law at the University of Virginia and William and Mary, education at Longwood, business administration at Old Dominion University and the University of Virginia, psychology at Old Dominion, and social science at Virginia Commonwealth University. These occur where larger enrollments are concentrated in a limited number of courses. One major factor which contributes to VPI & SU's low institutional average of 2.9 at the graduate level is the fact that it has 26 per cent of its different course offerings and only 6 per cent of its FTE student enrollment (by course level) at the graduate level.

The weighted average size of classes for all levels combined is presented in Table 21. This analysis includes an institutional average for the University of Virginia which should receive comment. At each level, the University of Virginia's weighted average size of classes taught equals or exceeds the average for all institutions. In the analysis for all levels combined, however, this institution's average is 13.5, while the statewide average is 19.3. A study of Tables 2 through 5 and 13 through 16 reveal that none of the other institutions has such a degree of concentration of courses and semester hours at the graduate level as does the University of Virginia. Since a majority of this institution's semester hours of classes taught have a weighted average class size of only 5.4, it is apparent that this accounts for the below average ratio in the analysis for all levels combined. This commentary further substantiates the importance of conducting instructional cost studies on a course or student level basis.

17. WEIGHTED AVERAGE SIZE OF CLASSES TAUGHT (foundation level)

SECTION 2
ANALYSES OF STUDENT-CREDIT-HOURS

STUDENT-CREDIT-HOURS PRODUCED

The best measure of the volume of instructional service which has been devised to this point is the number of student-credit-hours produced. One student-credit-hour represents one student taking a one-credit course for one term. Total student-credit-hour production for any class is obtained by multiplying the number of students enrolled in the class by the credit value of that class. For example, a three-credit class in which there are 25 students enrolled would yield 75 student-credit-hours. Data on student-credit-hours may be interpreted as a quantitative measure of instructional output or production. The number of student-credit-hours produced in a given subject field is a good index of student demand for instruction in that field.

The number of student-credit-hours produced is the base used in Virginia for computing the number of full-time-equivalent students at state-controlled institutions. Thus, an institution which produced 15,000 student-credit-hours during a given term, at the undergraduate level, would have 1,000 FTE students enrolled. This is based on the definition of 15 student-credit-hours equalling 1 FTE student.

Student-credit-hour data are presented in terms of the four levels of instruction used in all previous tables in this report. "Level of instruction" is interpreted in two different ways in this section. Tables 22 through 25 present analyses by level of course, and the next four tables present analyses by level of student. The last table, Table 30, presents data for all levels combined. The analyses by student level are carried out in terms of the academic level of students actually enrolled in the courses regardless of the course level designation. Analyses by course level, on the other hand, are made in terms of the designated level of the courses as determined by institutional officials. Thus, under the latter classification, all student-credit-hours generated by a particular lower level course would be designated as lower level student-credit-hours even though some juniors and seniors might be enrolled in the course.

Calculations of student-credit-hours produced have been prepared both ways in this study in order to determine the magnitude of differences in the two methods. The following calculations reveal that the two methods result in substantial differences for some institutions, while the differences at others are slight.

Student-Credit-Hours Produced

In the aggregate, the "course level" method results in a 5.5 per cent greater number of student-credit-hours at the lower level than does the "student level" method. At the upper level the course level method results in 8.9 per cent fewer student-credit-hours, and at the graduate and professional level, the course level method results in 0.6 per cent fewer student-credit-hours than the "student level" method.

It is believed that the student level method is the more appropriate of the two measures because (1) it is subject to a greater degree of uniformity of application among institutions and (2) the level of students in a class is a more accurate identification of the level of instruction than a sometimes arbitrarily defined course level. Institutions sometimes differ widely with respect to stratification of courses by level. Some institutions might have a rather loose interpretation of level and open a number of courses to students at different levels. Other institutions might adhere strictly to the course level identification and permit only students at the same level as the course to enroll in the course.

It is interesting to compare institutions with respect to the proportion of student-credit-hours produced at the various levels. As is to be expected, significant variations exist among four-year institutions with respect to the mix of student-credit-hours produced by level. At the lower level, there is a range from a low of 38 per cent of the total at the University of Virginia to a high of 78 per cent at Christopher Newport. At the upper level, there is a range in percentages from 22 at Christopher Newport and 25 at Virginia State to 45

per cent at VMI. At the graduate level, the range is from zero at five institutions which offer no graduate work to a high of 30 per cent at the University of Virginia. These differences among institutions are quite meaningful insofar as the faculty resources needed by institutions are concerned. Practically all institutions have, and should have, marked differences among the four levels in the ratio of student-credit-hours to faculty. Thus, the greater the proportion of an institution's students at the upper and graduate levels, the lower the student-teacher ratio for the institution should be.

The following listings show how the various subject fields rank with respect to the number of student-credit-hours produced in the 27 fields. Subject field classifications applied to course data, as has been done in the following analyses, should not be confused with the programs in which students are majoring. For example, students majoring in Home Economics would generate a portion of their student-credit-hours in English if they were taking a course in English.

These statistics reflect rather clearly those fields at the lower level in which students are enrolled most frequently during their freshman and sophomore years. These fields include the social sciences, English, mathematics, physical science, and other subject fields which comprise the major portion of most general education programs. At the upper level, certain professional fields such as education, business administration, and engineering rank among the top fields, reflecting the enrollment of substantial numbers of students in these fields during their junior and senior years. The data also reveal heavy concentrations of students at the graduate and professional level in certain professional fields such as law, education, business administration, and engineering.

SECTION 3
ANALYSES OF FACULTY AND INSTRUCTIONAL COSTS

NUMBER OF FULL-TIME-EQUIVALENT RESIDENT TEACHING FACULTY

The total time of each faculty member engaged in resident teaching during the Fall term of 1970-71 was reported to the State Council by the institutions. The statistic of full-time-equivalent (FTE) faculty member has been utilized to analyze these data by student level, subject field, and institution. This FTE tabulation equates the total time devoted to resident instruction by each full- and part-time faculty member to full-time. Therefore, the term "full-time-equivalent faculty" is defined as including all persons who devote full-time to the service of the employing institution (at the rate of 1.0 FTE), and all persons who devote part-time service at an appropriate fraction of 1.0 FTE. The appropriate fraction would be dependent upon the relative amount of service rendered. To illustrate, five full-time faculty members and three half-time faculty members would be reported by an institution as 6.5 FTE faculty.

For the purposes of this report, the time of a faculty member teaching in two or more subject fields has been allocated on the basis of the total credit value of courses he taught. The faculty member's time has been further allocated on the basis of the student-credit-hours produced at the five levels (foundation, lower, upper, professional, and graduate).

The FTE resident teaching faculty by student level and subject field are presented in Tables 31 through 36. This analysis shows that approximately 7 per cent of the full-time-equivalent instructional staff of all institutions was at the foundation level, 54 per cent at the lower level, 29 per cent at the upper level, 1 per cent at the professional level, and 9 per cent at the graduate level.

Table 37 represents one interpretation of the faculty data by comparing FTE student enrollments (by institution and student level) with FTE faculty. Among the four-year institutions at the lower level, the ratio of students to faculty varies from a low of 11.4 at VMI to a high of 26.9 at U.Va. These ratios drop substantially at the upper level where the low is 10.2 at VMI, and the high is 20.6 at U.Va. At the professional level, the ratio of students to faculty is 25.5 at U.Va. and 21.3 at William and Mary. The range at the graduate level is from a low of 9.2 at VCU to a high of 18.0 at George Mason. For those institutions, primarily universities, whose faculty have released time to do research, full-time-equivalent research data have been added to FTE teaching faculty to derive overall student-faculty ratios. It is considered appropriate to include research faculty to develop overall student-faculty ratios, since the processes of instruction and research are so closely interwoven.

31. NUMBER OF FTE RESIDENT TEACHING FACULTY (foundation level)

[a] Does not include data on medical, dental, and pharmacy instruction at the University of Virginia and Virginia Commonwealth University. Also not included are data on military science instruction, instruction carried on by faculty not compensated through the institution, and instruction taught by personnel of the Virginia Institute of Marine Science.

AVERAGE STUDENT-CREDIT-HOURS PRODUCED PER FULL-TIME EQUIVALENT FACULTY MEMBER

Tables 38 through 43 show the average number of student-credit-hours produced per FTE faculty member based on Fall term 1970-71 data, equated to a nine-month, or regular session, period. It is necessary to show student-credit-hour productivity on a nine-month basis since both the quarter and semester systems are utilized by Virginia's state-controlled institutions.

The average number of student-credit-hours produced per FTE faculty member was obtained by dividing the total student-credit-hours produced (by student level) by the number of FTE resident teaching faculty at the corresponding level. The results were then multiplied by two in order to equate to a nine-month, or regular session, basis. Special adjustments were necessary for Radford which operates on a quarter basis but reports credit-hour data on a semester basis.

Very careful consideration should be given these data before arriving at conclusions. Several factors may influence the results of this analysis. High student-credit-hour productivity may indicate overloading of faculty members, but it may also be due to the particular nature of the subject matter or courses which permits large classes. Although it is difficult to assess what the student-credit-hour productivity in the various fields should be, differences in subject matter, teaching methodology and the like, are suggestive of reasons for different student-credit-hour expectancy among the various fields. Comparisons of data among the institutions, if made at all, should be made within the same subject field and only at the same level. The data presented illustrates the known fact that student-credit-hour productivity varies by level in higher education. The level of productivity indicated by the data in these tables is dependent upon two variables, the average class size and the number of semester hours of classes taught by each faculty member. Lower productivity figures at the upper and graduate levels are due in large part to smaller enrollments. These in turn are attributable to a number of reasons, including fewer students available for enrollment, the specialized nature of the courses, the tendency of upper level students to select lower level courses as electives, and the tradition of providing greater faculty-student contact.

An example might be helpful in considering what an average student-credit-hour production figure per FTE faculty means in terms of class size and semester hour teaching load. If an FTE faculty member teaches 24 semester hours per regular session (or 12 each of two semesters), and he has an average of 25 students in each of his classes, his annual student-credit-hour production would be 600 (24 X 25). He could also produce this same number of student-credit-hours by teaching a greater number of semester hours and having fewer students in his classes, or by teaching fewer semester hours and having larger classes.

38. AVERAGE STUDENT-CREDIT-HOURS PRODUCED PER FTE FACULTY (foundation level)

INSTRUCTIONAL SALARY COST PER STUDENT-CREDIT-HOUR PRODUCED

Presented in Tables 44 through 49 are instructional salary costs per student-credit-hour produced by student level, subject field, and institution for the Fall Term of 1970-71. This analysis was obtained by dividing the total resident teaching salaries by the student-credit-hours produced (Tables 26 through 30).

It should be noted that the costs per student-credit-hour produced data which are presented represent only instructional salary costs. Instructional salary costs normally comprise approximately 80 to 85 per cent of the total cost for the function of instruction. Expenditures for the function of instruction constitute approximately 60 per cent of all educational and general costs. Therefore, in the cost analyses presented in this report, approximately 50 per cent of total education and general expenditures of all the institutions are included. Because of the magnitude of expenditures for faculty salaries, the operating efficiency of colleges and universities from a budgetary standpoint is, to a large extent, affected by what happens in the instructional process. The two basic factors which affect the instructional salary cost per student-credit-hour produced are the average faculty salary and the number of student-credit-hours produced per FTE faculty member. In attempting to determine the reasons why a particular student-credit-hour cost figure is high or low, one can gain a great deal of insight by studying these two factors. For example, if the average faculty salary is relatively low, and the production level is high, the instructional salary cost per student-credit-hour produced will be low.

Only salaries paid for resident credit instruction have been included in the analyses of faculty remuneration. That portion of salaries paid for institutional activities other than resident teaching has been excluded from this study in accordance with the institutions' allocation of the faculty members' time. Also, an adjustment has been made to the time and salary of faculty teaching non-credit courses so that these activities would not distort the costs of resident credit instruction. The salary of a faculty member teaching in two or more subject fields has been allocated to each of the different areas of study on the basis of the total credit value of courses he taught. The faculty member's salary for each subject field has been further allocated on the basis of student-credit-hours produced at the five levels (foundation, lower, upper, professional, and graduate).

At the foundation level, shown in Table 44, the average instructional salary cost per student-credit-hour produced for all institutions ranges from a low of $9.86 at Southwest Virginia Community College to a high of $33.11 at Clinch Valley College.

At the lower level, shown in Table 45, the average instructional salary cost per student-credit-hour produced for the two-year colleges ranges from a low of $12.92 at Northern Virginia Community College to a high of $40.39 at Eastern Shore. For the four-year colleges and universities the range if from $15.53 at U.Va. to $34.62 at VMI. The average for all institutions is $18.97.

At the upper level, as shown in Table 46, the average for all institutions is $25.45; at the professional level, it is $27.55; and at the graduate level, the average cost per credit-hour is $46.95. Thus, the average cost of upper level offerings is 34 per cent higher than that for lower level offerings. Graduate level offerings are, on the average, 148 per cent more expensive than lower level offerings.

Table 48 shows a wide range in costs among the various institutions at the graduate level. The highs at VPI & SU of $68.03 and at Virginia Commonwealth University of $67.32 are substantially above the average for all institutions combined of $46.95.

44. INSTRUCTIONAL SALARY COST PER STUDENT-CREDIT-HOUR PRODUCED (foundation level)

[a] Immediately prior to publication the School of Nursing of VCU informed the State Council that the data it had submitted relating to this analysis was inaccurate. Therefore, these figures and the overall averages for Nursing should be ignored by the reader.

AVERAGE INSTRUCTIONAL SALARY COST PER FULL-TIME-EQUIVALENT FACULTY

Average instructional salary costs per FTE faculty member based on 1970-71 Fall term data equated to a nine-month period are shown in Tables 50 through 55. To obtain this analysis, total resident teaching salaries were divided by the number of FTE resident teaching faculty (Tables 31 through 36) with appropriate adjustments being made for the quarter term institutions.

The following tabulation shows the rank order of average salaries paid by student level and subject fields for all institutions combined.

Foundation Level		Lower Level	
Subject Field	Amount	Subject Field	Amount
Geography	$11,380	Religion	$13,214
Engineering	9,951	Forestry	13,143
Physical Sciences	9,906	City Planning	12,738

Religion	--	Trade and Industrial	9,238
All Subject Fields	$ 8,760	All Subject Fields	$10,302

Any interpretations of the average instructional cost per FTE faculty should give consideration to some of the factors which may have affected this analysis. For example, in several instances, the averages have been derived from data representing a relatively small number of faculty members. In addition, in certain cases, average salaries are affected substantially by data from

a single institution or a specialized group of institutions which cause average salaries not to be representative of a majority of institutions.

The tabulations show that the average salary for a foundation level FTE faculty member is $8,760, a figure which includes all the subject fields. This figure increases to $10,302 at the lower level, $12,082 at the upper level, and $14,878 at the graduate level. This pattern of average faculty compensation illustrates the fact that it is the more senior faculty members of higher academic ranks who are most often assigned to upper and graduate courses. The average faculty salary of $20,068 at the professional level is based almost exclusively on law school faculty data.
